San Joaquin Valley Drainage Implementation Program  
February 1998

# Acknowledgements

The San Joaquin Valley Drainage Implementation Program Management Group, chaired by Carlos Madrid, former Deputy Director of the California Department of Water Resources, identified the need for a report on the progress made by various groups to solve drainage problems. Mr. Madrid and Deputy Director Raymond Hart, present chairman of the Management Group, provided valuable support and guidance during preparation of this report.

*Drainage Management in the San Joaquin Valley - A Status Report* was prepared under the direction of Manucher Alemi, SJVDIP Coordinator, by DWR staff George Nishimura and Wayne Verrill. SJVDIP Budget and Program Committee members reviewed the report and provided valuable suggestions. Their contributions are greatly appreciated.

Most importantly, acknowledgment must be made of the growers in the Valley who have made much progress and continue to strive to implement new irrigation and drainage management techniques; the researchers who are working to develop new techniques and methods to achieve water conservation, drainage reduction and reuse, and drain water treatment; the staff of participatory government agencies who strive to organize, fund, and support efforts for agricultural and environmental sustainability; the environmentalists who strive to preserve and protect the ecological and natural resource heritage of the Valley; and the stakeholders and citizens who recognize the unique value and great importance of the natural resources of the Valley. The future of the Valley lies in the spirit of cooperation, good will, compromise, and coordination of effort of all involved parties.

Finally, thanks are due to staff of the Publications Unit, DWR's Division of Planning and Local Assistance, for their editorial review and publishing of this report.
